

USE THIS CHECKLIST WHEN RENTING AERIAL LIFTS

When you're ready to rent a boom lift, scissor lift or telehandler, run through this list with your rental provider so they can recommend the best equipment for your job.*

APPLICATION TYPE

The type of mining you're doing, and whether you are planning to use the machine in a specific application at your mine or on multiple applications could determine how flexible the model needs to be. Some lifts, such as AC-drive hybrid machines, offer the versatility to perform in different environments.

JOBSITE CONDITIONS

Special jobsite considerations such as noise and emissions restrictions, extreme temperatures or ground conditions, make a difference when renting equipment. Make sure to let your rental provider know about your jobsite conditions.

CAPACITY

Whether it's people and tools, or simply material, you'll want to estimate how much weight you'll need to lift. This will help ensure your aerial lift or telehandler has the capacity to meet your needs.

*These are equipment-related tips and do not cover other business or financial questions you may have when renting.

SAFETY FEATURES

Make sure your equipment rental meets your safety requirements. If you're working at height, fall prevention features are especially important. For example, all Genie® 6- and 8-foot boom platforms come standard with eight approved lanyard attachment points, allowing operators to work outside of the platform with a double lanyard system while maintaining 100% tie-off. Also, the [Genie Fall Arrest Bar](#) has a sliding, horizontal track that allows the operator to tie off and move freely outside of the platform using a single 6-foot shock-absorbing lanyard.

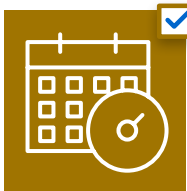

MACHINE TRAINING

Safe operation of any MEWP or telehandler starts with proper training. Some manufacturers, [including Genie](#), offer high-quality operator training and train-the-trainer courses to ensure that you are operating the equipment properly and safely. Your rental partner may have been trained by the manufacturers themselves on equipment and accessories.

ACCESSORIES OR ATTACHMENTS

What specific needs do you have in order to accomplish the work you need to do? Sharing this information with your rental provider will allow them to help you determine if your crews would benefit from any accessories or attachments. For example, [the Genie Lift Power™ System](#) includes a new generation of hydraulically driven generators to provide power to the platform.

RENTAL PERIOD

How long the equipment is required on the jobsite could impact serviceability and on-site refuel or recharge capabilities. For extended needs, it may also be worth comparing rental versus purchase costs with your equipment provider for the most cost-effective approach.

Use this checklist and your Genie dealer's expertise to get the best machine for your job.
