LIFT GUARD™ | CONTACT ALARM

THE NEW GENERATION OF SECONDARY OPERATOR PROTECTION

This system is designed to activate when an obstruction makes contact with an activation whisker mounted on the lift's platform guardrails, alerting the operator, occupants and ground personnel of a potential hazard. Available on Genie® GS™ scissor lifts and GR™, GRC™ and QS™ vertical masts.

Easily installed or removed with only a few fasteners and electrical harness connectors, it will fit on units* back to 2011, installed from the factory or as an aftermarket kit.

AVAILABLE STARTING FROM LATE 2018 IN EUROPE VIA OUR PARTS WEBSITE WWW.GOGENIELIFT.COM

* Genie® GS™ scissor lifts and GR™, GRC™ and QS™ vertical masts fitted with the Genie Smart Link™ system.

HOW DOES IT WORK?

- Enabled whenever a function is selected
- Triggered when an obstruction deflects activation whisker
- When activated, machine motion stops, alarm sounds and beacons flash
- Alerts operator, occupants and ground personnel of a potential hazard
- Free-movement zone between the activation whisker and the guardrail allows mobility after system is activated
- Operator can continue to drive/elevate the platform once system activation is acknowledged
